TECHNICAL PROJECTS

Seedling - Github Frontend | Github Backend | Video Demo
An application that promotes emotional and mental awareness through journaling and regulating a user's moods daily
- An application built mainly with Ruby on Rails, React and Material-UI
- Implemented a calendar where a user can look back and track their previous entries
- Graph that shows a user's mood in the past seven days

World Of Magic - Github Frontend | Github Backend | Video Demo
A Harry Potter inspired application where a user uses spells to defeat monsters and achieve points for their team.
- An application built mainly with Ruby on Rails, JavaScript and Vanilla CSS
- Allowed users to create an account and be able to come back from where they left off
- Developed an algorithm where points would accumulate after defeating monsters and lives would be lost

Beta Climbers - Github | Website Demo | Video Demo
An application for climbers where they can interact with other climbers through discussion forums, view and add projects to their profile, and view various locations of places to climb.

- An application built mainly with Ruby on Rails and Semantics-UI
- Implemented a Weather API for real-time weather forecast
- Implemented sessions and cookies to save the user's experience until the next time they come back
